# Schizachyrium scoparium 'Sandhill'

Schizachyrium scoparium 'Sandhill,' commonly known as Little Bluestem, is a perennial grass native to North America. This ornamental grass is celebrated for its adaptability, hardiness, and striking beauty, making it a popular choice for garden enthusiasts and landscapers.

## Characteristics

Schizachyrium scoparium 'Sandhill' features slender, upright stems that reach heights of 2 to 4 feet. The foliage is bluish-green during the growing season, turning to a vibrant mix of reds, oranges, and purples in the fall. This transformation makes it a standout in any landscape.

Little Bluestem is highly adaptable to various soil types, including sandy and clay soils. It thrives in full sun and is drought-tolerant once established. It is commonly found in prairies, meadows, and open woodlands.

## Uses in Landscaping

Due to its colorful foliage and vertical growth habit, Schizachyrium scoparium 'Sandhill' is often used in borders, mass plantings, and naturalized areas. Its ability to attract pollinators such as butterflies and its resistance to deer make it an excellent addition to ecological gardens.

## Maintenance

This grass requires minimal maintenance. It should be cut back to the ground in late winter or early spring to allow new growth. Little Bluestem is generally free from major pests and diseases, making it a low-maintenance option for home gardeners.

## Conclusion

Schizachyrium scoparium 'Sandhill' is a versatile and visually appealing grass that can enhance the beauty of any garden. Its seasonal color changes and ease of care make it a favorite among gardeners looking to introduce a touch of nature's artistry into their landscapes.
